Novel apoprotein antigens encoded by Mycoplasma hyopneumoniae for use in vaccines to prevent and treat diseases caused by infection with Mycoplasma hyopneumoniae in animals, especially pigs.

Claim 4; Page 20-21; 38pp; English.

The invention comprises the amino acid and coding sequences of Mycoplasma hyopneumoniae mhp3 proteins, the invention also comprises novel apoprotein antigens encoded by the M. hyopneumoniae mhp3 gene. M.

The mhp3 genes, proteins and apoprotein antigens of the invention are useful in the manufacture of a vaccine for treating/ preventing a disease or disorder caused by infection with M. hyopneumoniae in an animal, especially a pig. The present amino acid sequence represents a mutant version of the Mycoplasma hyopneumoniae in protein which was modified for expression in E. coli

MHP3 antigen and its fragments are useful in manufacturing a vaccine for treating or preventing a disease or disorder in an animal, especially pig, caused by M. hyopneumoniae infection e.g. enzootic mycoplasma pneumonia. The mhp3-encoded proteins may be used as immunogens to generate antibodies which immunospecifically bind such an immunogen. The antibodies generated against the antigen are useful in diagnostic immunoassays, passive immunotherapy and generation of anti-idiotypic antibodies. Mhp3 proteins may also be used in immunoassays, e.g. to detect or measure in a biological sample from a vaccinated or potentially infected test animal the presence of antibodies to the antigen, and thus to monitor the immuno response and/or to diagnose infection of the animal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 451 AA;

M. hyopneumoniae is a bacterial pathogen that causes enzootic mycoplasmal pneumonia in pigs. The mhp3 genes, proteins and apoprotein antigens of the invention are useful in the manufacture of a vaccine for treating/ preventing a disease or disorder caused by infection with M. hyopneumoniae in an animal, especially a pig. The present amino acid sequence represents a Mycoplasma hyopneumoniae mhp3 protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 11; Fig 1; 38pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               449
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 209
```

The sequence represents Mycoplasma hyopneumoniae a recombinant MHP3 antigen lacking the first 28 amino acids (the gutative signal sequence MHP3 antigen and its fragments are useful in manufacturing a vaccine i treating or preventing a disease or disorder in an animal, especially pig, caused by M. hyopneumoniae infection e.g. enzootic mycoplasma

sequence).

The mhp3-encoded proteins may be used as immunogens to generate antibodies which immunospecifically bind such an immunogen. The antibodies generated against the antigen are useful in diagnostic immunoassays, passive immunotherapy and generation of anti-idiotypic antibodies. Mhp3 proteins may also be used in immunoassays, e.g. to detect or measure in a biological sample from a vaccinated or potentially infected test animal the presence of antibodies to the antigen, and thus to monitor the immune response and/or to diagnose infection of the animal
                                                                                                                                                                                                                                                                                                                                                                                                                                              Regression associated antigen; tumour; anti-idiotypic antibodies; antibodies;

RAA's can be used for tumour immunotherapy and for producing and purifying antibodies which can be used for tumour diagnosis, localisation and therapy. The antibodies can also be used for the production of anti-idiotypic antibodies which can be used in immunotherapy. (Updated on 25-MAR-2003 to correct PF field.)

Hypopneumoniae mhp3 gene. M. Hypopneumoniae is a bacterial pathogen that causes enzootic mycoplasmal pneumonia in pigs. The mhp3 genes, proteins and apoprotein antigens of the invention are useful in the manufacture of a vaccine for treating/ preventing a disease or disorder caused by infection with M. hypopneumoniae in an animal, especially a pig. The present amino acid sequence represents the Mycoplasma hypothinis Ag234-5 protein which is shown in a figure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel apoprotein antigens encoded by Mycoplasma hyopneumoniae for vaccines to prevent and treat diseases caused by infection with Mycoplasma hyopneumoniae in animals, especially pigs.

The activity of CTL-inducers of the invention may be described as cytostatic. The antigen or its peptide fragment are applicable in anticancer agents for the prevention or treatment of cancer. The antigen and its derivative have superior CTL-inductive effect, giving anticancer agents that have low toxicity. The current sequence represents the M161 antigen amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 428 AA;

The polynucleotide is useful for augmenting proliferation of B and T lymphocytes. The present sequence is Mycoplasma fermentans IL-

The polynucleotide is useful for augmenting proliferation of B and T lymphocytes. The present sequence is Mycoplasma fermentans IL-X precursor protein.

The polynucleotide is useful for augmenting proliferation of B and T lymphocytes. The present sequence is Mycoplasma fermentans II
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated polynucleotide, useful for augmenting proliferation of

Oligonucleotide probes for the cDNA were designed from putative N-terminal M161Ag peptide sequences isolated from P39 cells. M161Ag can be used in the development of a leukaemia treating agent

Sequence 6004, Application US/09134000C

PATENT NO. 6617156

GENERAL INFORMATION:
APPLICANT: Lynn Doucette-Stamm et al
ITITLE OF INVENTION: NUCLEIC ACID AND AMINO ACI
TITLE OF INVENTION: ENTERCOCCCUS FAECALIS FOI
FILE REFERENCE: 032796-032

CURRENT APPLICATION NUMBER: US/09/134,000C

CURRENT FILING DATE: 1998-08-13
PRIOR APPLICATION NUMBER: US 60/055,778

PRIOR FILLY DATE: 1997-08-15

NUMBER OF SEQ ID NOS: 6812

SOFTWARE: PATENTIN VERSION 3.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 6005, Application US/09134000C
